🚀 Challenge 1
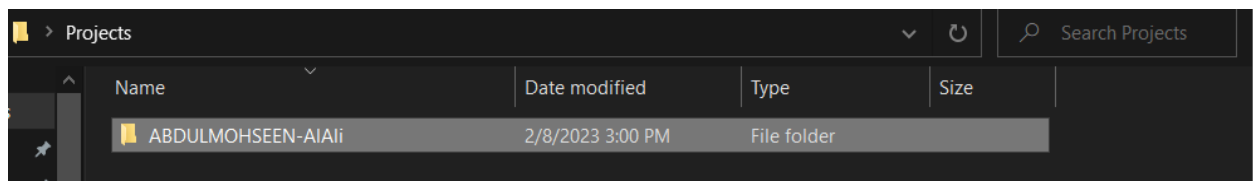

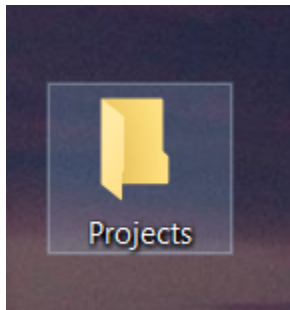

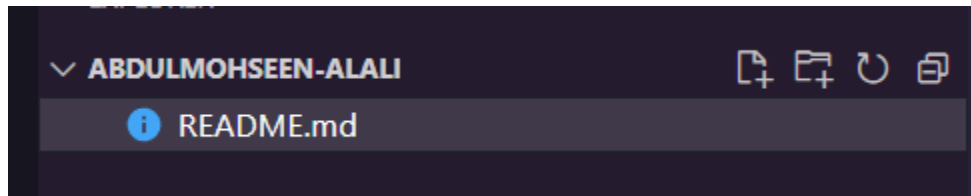

In this task, you'll learn how to create your own repository and design your profile.

Step 1: Create a folder, call it "Projects", and inside that folder, create another folder, name it by **your github username** 😎

Step 2: Open the folder with your github username in VS Code, and create a file, and call it "`README.md`"

Step 3: <mark>Edit the file as you wish</mark>, and commit your changes to your local repository using the following commands:

```
>git add .
```

```
>git commit -m "commit message"
```

Step 4: Now it's time to link it to GitHub... to do that, create a repository on github, and name it by <mark>your GitHub username,</mark> Then **copy the git link** (Make sure your repo is public)

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? Import a repository.

ABDULMOHSEEN-AlAli   ✔

ABDULMOHSEEN-AlAli is available.

🐙 **ABDULMOHSEEN-AlAli/ABDULMOHSEEN-AlAli** is a ✨*special*✨ repository that you can use to add a `README.md` to your GitHub profile. Make sure it's public and initialize it with a **README** to get started.

is kind of thing before

https://github.com/ABDULMOHSEEN-AlAli/ABDULMOHSEEN-AlAli.git

an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

**Step 5:** Go back to VS code, and write down the following commands:

>git remote add origin <LINK YOU COPIED>

>git branch -M main

>git push origin main

Step 6: Go to your GitHub profile... Now it looks cooler 🚀 😎
